DETAILED ACTION

Allowable Subject Matter

1. Claims 1-18 are allowed.
2. The following is an examiner's statement of reasons for allowance:
 - a. Applicant discloses a RADIUS-accounting communication and in particular a method for assigning unique identifiers for allowing communication between a GPRS (General Packet Radio Service) 1-system and a RADIUS (Remote Authentication Dial In User Service) server. Applicant's invention is novel and innovative in the sense that it uses said GGSN for combining the APN gateway address and the subscriber IP address, to form a unique subscriber identifier, and sending from said GGSN said identifier to the RADIUS server for accounting. The prior art Lager (U.S. Patent No. 6.636.502) teach a method, a switching device, a telecommunication system and a terminal station, in particular for a GSM-based General Packet Radio Service system (GPRS), that allow a subscriber station to select a predetermined network of several packet data networks (PDNs) connected to a gateway GPRS support node (GGSN). The packet data networks can be any kind of packet data networks or Internet Service Providers (ISPs). Lager et al taken alone or in combination with Modarressi et al (U.S. Patent No. 6.667.971) fail to teach or suggest a system and method that uses said GGSN for combining the APN gateway address and the subscriber IP address, to form a unique subscriber identifier, and sending from said GGSN said identifier to the RADIUS server for accounting

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
